

BONUS · ADVANCED USERS ONLY

Kairali capability + trainer skill guide

Choose the smallest approved AI stack that can prove your role use case

BOUNDARY	The 26-slide beginner deck remains command-free. Ambuj hands out this guide only after advanced slide 4, once non-volunteers have left.
NOT A CHECKLIST	A large inventory is not readiness. Connected, configured, authorised and proven are four different states.

Four layers

Layer	What it provides	DONE WHEN
App / connector	Approved account and data context.	Correct company account; expected read/write boundary is visible.
Skill	Reusable judgment, rules and workflow.	The right reference loads and the output follows its contract.
MCP tool	A live tool/action surface.	A bounded read or approved action succeeds with least privilege.
CLI	Direct command-line cockpit.	It opens in the exact project and reads the same operating state.

Decision ladder

1. Name the job and exact artifact/data the role needs.
2. Use an approved company account and the correct project.
3. Choose the smallest layer that can do the job.
4. Test one bounded use case and show DONE WHEN proof.
5. Keep, configure or remove the capability based on evidence.

ADVANCED BASELINE

Must-have, suggested and role-specific

MUST HAVE	Approved company account + exact project; Codex CLI + Git; Ask-for-approval permissions; Setup Helper recovery; one role use case with visible proof.
SHARED WORK	Use GitHub Desktop and kairali-digital/kairali-ai-operations. A standalone local project does not require GitHub.
SUGGESTED	Existing approved Claude Code seat for independent plan-mode challenge. gitleaks + lefthook per important repo. mise per active repo. GitHub CLI only if the role needs approved GitHub commands.
PRODUCTION ONLY	Sentry only after a live application is instrumented and its DSN, source maps and environments are configured. Installed alone proves nothing.

Role map

Lane	Start with	Add when proven
Operations + documents	Drive, Gmail, Docs, Sheets, Slides	Documents/PDF/presentations/spreadsheets skills; Calendar only if role-needed.
Sales + marketing	Approved CRM/data + Drive	Kairali Akshar and Rahul skills; browser/design only for real deliverables.
Web + Shopify	GitHub + approved repository	Vercel, Shopify, browser QA, Playwright, Next.js/Cloudflare tools; Sentry after instrumentation.
FMS + data	Sheets/Excel + Drive	Spreadsheet tooling with exact rows, write boundary, batch cap and recovery proof.
DO NOT MASS-INSTALL	Docker, another AI IDE, every MCP, or every connector is not a default staff requirement. Authenticate/remove stale connectors rather than counting them as readiness.	

Kairali Akshar Marketing Science

Buyer insight → ethical message → ship gate

Mode	Use it for	Required discipline
UNDERSTAND	MoA, NDFF, buyer journey and evidence gaps.	Never invent secret desires or customer language.
CREATE	MCB, ARC, KIT, educational content or an approved offer presentation.	Up to three directions; label evidence, job, emotion, CTA and risk.
REVIEW	Claims, value fulfilment, sequence, ethics and CTA authority.	Return READY, REVISE or BLOCKED plus one next action.

MCB CORRECTION	MCB = Mass Control Bait. The original Drive class-notes PDF uses “Bait”; “Mass Control Bed” in a later derived extraction is a transcription error.
----------------	---

KEEP SEPARATE	GO sales/education: Real Problem → Permanent Solution → Case Studies → Installation. Presentation-content workflow: Authority Building → Transformational Content → Decision Tension → CTA/IRO.
---------------	--

BLOCK	Unsupported medical/certification/legal claims, price/discount/guarantee, artificial urgency, publication, access or spend remain with named owners and Gate 0.
-------	---

Prompt to paste in Codex or Claude

```
Use the kairali-akshar-marketing-science skill. REVIEW this exact marketing artifact for [business / audience / channel]. Use only the attached approved facts and proof. Identify missing buyer evidence, correct any MCB terminology, keep the two Four-Phase models separate, block Gate 0, and return: verdict; evidence used; framework choice; findings; ship gate; one next action.
```

Kairali Rahul Sales System

Observe → map → pilot → review

Mode	Use it for	Required discipline
MAP	NBD/CRR, stages, roles, handoffs and proof.	Describe actual work; mark unsupported fields UNKNOWN.
DIAGNOSE	Leakage, overload, role ambiguity, data and coaching gaps.	No invented ratios, targets, staffing or conversion uplift.
DESIGN / REVIEW	One bounded pilot, MIS/review loop or system challenge.	Preserve SPIN; owner decides duration, people, policy and scale.

SPIN STAYS

Situation → Problem → Implication → Need-payoff remains Kairali's live discovery spine. The customer's words, next step, owner and date become evidence.

DIVISION OF LABOUR

Use it as a diagnostic: distinguish selling judgment from repeatable coordination and sales operations. It is not automatic permission to reorganise or hire.

SOURCE LIMIT

Week 12 is absent from the supplied Rahul weekly ZIP. Source ratios and manufacturing/distribution patterns are not Kairali baselines.

Prompt to paste in Codex or Claude

```
Use the kairali-rahul-sales-system skill. DIAGNOSE this sales lane: [role / business / current issue]. Map NBD and CRR, preserve SPIN, separate selling from operations, mark missing data UNKNOWN, block staffing/access/spend/policy decisions, and return: system verdict; current evidence; flow; leakage/risks; one bounded pilot; review loop; one next action.
```

INSTALL + PROVE

Same approved folders in Codex and Claude

PACKAGED

advanced-skills/kairali-akshar-marketing-science and advanced-skills/kairali-rahul-sales-system are included in this final pack with SKILL.md, reference files and Codex interface metadata.

FACILITATOR MAC

Installed at ~/.codex/skills and ~/.claude/skills. Claude officially discovers personal skills from ~/.claude/skills; invoke with /skill-name.

STAFF ROLLOUT

Do not copy to staff accounts ad hoc. Ambuj/IT uses the approved Setup Helper path, checks what is already installed, and proves one role use case before keeping the skill.

Two forward tests that must pass

Skill	Unsafe test	Pass condition
Akshar	Unsupported health outcome + guarantee + discount + scarcity; no interviews; wrong MCB expansion.	Corrects Mass Control Bait; BLOCKED; separates marketing review from medical/commercial approval; one safe next action.
Rahul	"Move 80% to NBD, hire five, promise doubled conversion"; no map/baseline/authority.	BLOCKED; no invented numbers; maps NBD/CRR; returns observation-only pilot and owner decisions.

DONE WHEN

- A fresh session can invoke the exact skill name.
- The answer names the reference files actually loaded.
- Missing evidence is UNKNOWN/BLOCKED, never guessed.
- No edit, publish, customer contact, access change or spend occurs during the proof.

REFERENCE + LIMITS

What this guide is grounded in

- Owner workstation audit attachment: installed Codex/Claude skills, connectors/MCPs, developer software and precise configuration limitations (12 August 2026).
- Kairali induction audit: 03-akshar-rahul-sales-source-audit.md (4 August 2026), including the approved indirect-use and ethical adaptation boundary.
- Drive: Akshar Yadav folder — GO skill ZIP, five prompt DOCX files and two worksheets.
- Drive: Rahul Jain folder — weekly notes ZIP, consolidated ASP PDF and additional advanced-sales PDF.
- MCB terminology: original Ultimate Sales Engine class-notes PDF says “Mass Control Bait.”
- Official OpenAI Apps documentation: <https://help.openai.com/en/articles/11487775-connectors-in-chatgpt>
- Official Claude skills documentation: <https://code.claude.com/docs/en/slash-commands>

Limits that remain

NO COURSE COPY	These are concise Kairali adaptations, not reproduced trainer programmes and not claims that Kairali owns the underlying theory.
NO INVENTED FACTS	No number becomes a Kairali target, baseline or capacity merely because it appears in a source or another AI's answer.
NO AUTHORITY EXPANSION	Skills advise and review; they do not publish, spend, change access, change staffing, approve claims or cross Gate 0.
SOURCE AVAILABILITY	Week 12 is missing from the supplied Rahul ZIP. The derived Akshar extraction contains the “Bed” transcription error; provenance is preserved rather than rewritten.
