

Build Your First Two AI Humans

Email Triage + Drive Inventory, with an optional LinkedIn Draft bonus

WHO	REQUIRED
Meeting attendee without a named homework page	Two separate, read-only local projects
HUMAN ROLE	PROOF
Mission, login, approval and final judgment	Visible local report + evidence + validator pass

Use this guide only if you attended the meeting and do not already have a named start or homework page.

You are learning to wear Codex like an Iron Man suit. You provide the mission and judgment. Codex performs approved work through a controlled autonomous loop.

You will make two small workers:

1. **Email Triage AI Human** - reads up to 25 inbox messages and makes a local review list. It does not change your mailbox.
2. **Drive Inventory AI Human** - reads metadata for up to 25 Drive items and makes a local inventory. It does not open or change the files.
3. **Optional LinkedIn Draft AI Human** - makes a local draft from facts you supply. It does not open LinkedIn or publish anything.

An AI human is one folder with one job. Each worker gets a separate folder so their instructions, state and proof never mix.

The whole loop at a glance

1. Find the homework pack on your screen.
2. Make an [AI Humans](#) folder inside Documents.
3. Copy the Email and Drive starter folders into it.
4. Open one starter folder as a local project in the ChatGPT desktop app.
5. Connect only the app that project needs.
6. Paste the exact prompt.
7. Stop at the visible [DONE WHEN](#) result.

8. Repeat with the second folder.

This is a standalone local-project path. It does not need GitHub or GitHub Desktop.

First rescue - use this if any screen looks different

Start a new normal ChatGPT chat. Paste the complete message below. Do not shorten it.

I am stuck setting up my Kairali AI workspace. I do not know Terminal, Python, Git, GitHub, folders, projects or Codex.

Be my Setup Helper.

1. Work out whether I am on Mac or Windows and check what is already installed before changing anything.
2. Do every approved safe setup step you can yourself.
3. If a click, login, account choice or permission must be done by me, show me only that one action in plain Mac or Windows words. Wait for me, then verify it worked.
4. Never ask me to use Terminal, PowerShell, Command Prompt, Python, a CLI or type a command.
5. Never ask for, read or repeat my password or one-time code.
6. Use only my approved company account and company folder.
7. Keep permissions on Ask for approval. Never choose Full access.
8. For the shared Kairali workspace, use GitHub Desktop buttons. For a standalone local project, do not install GitHub unless it is actually needed.
9. Continue until ChatGPT is installed, Codex is open, the correct project is connected, AGENTS.md is visible, approved apps are connected when required, and the startup test passes.
10. If you cannot continue safely, write one OPEN_REGISTER.md row with the failed step, exact error, what you checked, and the one human access or decision needed. Then tell me whether Ambuj or Abilash must help.

Do not teach me how the machinery works unless I ask. Start now by checking what I already have.

DONE WHEN: The helper shows only one next action, waits, and verifies it before showing another.

Step 1 - find and open the homework pack

The file is named EVERYONE-ELSE-AI-HUMAN-HOMEWORK-PACK.zip.

On a Mac

1. Click the smiling blue **Finder** face in the Dock.

DONE WHEN: A Finder window is open.

2. Click **Downloads** in the left side.

DONE WHEN: You can see the ZIP file.

3. Double-click the ZIP file once.

DONE WHEN: A normal folder with the same name appears.

4. Double-click the normal folder.

DONE WHEN: You can see [AI-HUMAN-STARTERS](#) and this guide.

On Windows

1. Click the yellow **File Explorer** folder on the taskbar.

DONE WHEN: A File Explorer window is open.

2. Click **Downloads** on the left.

DONE WHEN: You can see the ZIP file.

3. Right-click the ZIP file. Click **Extract All**. Click **Extract**.

DONE WHEN: A normal folder with the same name opens.

4. Open the normal folder.

DONE WHEN: You can see [AI-HUMAN-STARTERS](#) and this guide.

If the ZIP is not visible, do not search the whole computer. Paste the Setup Helper rescue. The helper should check Downloads and ask Ambuj only if the pack was not given.

Step 2 - make one home for your AI humans

On a Mac

1. In Finder, click **Documents** on the left.

DONE WHEN: The word Documents is at the top of the window.

2. Click **File** at the top of the screen. Click **New Folder**.

DONE WHEN: A new folder name is selected and ready to type.

3. Type [AI Humans](#) and press Return.

DONE WHEN: Documents contains a folder named [AI Humans](#).

4. Go back to the homework pack. Open [AI-HUMAN-STARTERS](#).

DONE WHEN: You see three numbered starter folders.

5. Copy [01-Email-Triage-AI-Human](#) into Documents > AI Humans.

DONE WHEN: The Email folder exists inside [AI Humans](#).

6. Copy [02-Drive-Inventory-AI-Human](#) into Documents > AI Humans.

DONE WHEN: The Drive folder exists beside the Email folder.

On Windows

1. In File Explorer, click **Documents** on the left.

DONE WHEN: Documents is open.

2. Click **New**, then **Folder**.

DONE WHEN: A new folder name is selected and ready to type.

3. Type [AI Humans](#) and press Enter.

DONE WHEN: Documents contains a folder named [AI Humans](#).

4. Go back to the homework pack. Open [AI-HUMAN-STARTERS](#).

DONE WHEN: You see three numbered starter folders.

5. Copy [01-Email-Triage-AI-Human](#) into Documents > AI Humans.

DONE WHEN: The Email folder exists inside [AI Humans](#).

6. Copy [02-Drive-Inventory-AI-Human](#) into Documents > AI Humans.

DONE WHEN: The Drive folder exists beside the Email folder.

Keep the downloaded pack untouched. Your two copies are the workers you use.

Step 3 - check the ChatGPT desktop app

On a Mac

1. Open Finder. Click **Applications**. Look for **ChatGPT**.

DONE WHEN: You can see ChatGPT, or you know it is missing.

2. If ChatGPT is present, double-click it. Do not install it again.

DONE WHEN: The ChatGPT desktop app is open.

3. If ChatGPT is missing, open a web browser and use the official download link:

<https://learn.chatgpt.com/docs/quickstart>.

DONE WHEN: The official ChatGPT desktop app is installed and open.

On Windows

1. Click **Start**. Type **ChatGPT** into the search box.

DONE WHEN: You can see ChatGPT, or Windows says there is no matching app.

2. If ChatGPT is present, click it. Do not install it again.

DONE WHEN: The ChatGPT desktop app is open.

3. If ChatGPT is missing, open a web browser and use the official download link:

<https://learn.chatgpt.com/docs/quickstart>.

DONE WHEN: The official ChatGPT desktop app is installed and open.

Sign in with the approved company account. The login screen is handled by the service. Never paste a password or one-time code into a chat.

DONE WHEN: You are inside the ChatGPT desktop app with the approved company account.

Project 1 - Email Triage AI Human

Step 4 - open the Email folder as a local project

1. In the ChatGPT desktop app, choose **Codex**.

DONE WHEN: Codex is selected.

2. Choose **Open folder**, **Add project**, or the visible button that lets you select a folder on this computer.

DONE WHEN: A Finder or File Explorer folder picker opens.

3. Choose Documents > AI Humans > 01-Email-Triage-AI-Human.

DONE WHEN: The Email project appears in the app and **AGENTS.md** is visible to Codex without uploading it.

4. Keep permissions on **Ask for approval**. Never choose **Full access**.

DONE WHEN: The Email project is open and approval is still required for actions.

If the button wording is different, use the Setup Helper rescue. Do not guess.

Step 5 - connect Gmail only if it is missing

1. Open the **Plugins** tab in the ChatGPT desktop app.

DONE WHEN: The plugin directory is visible.

2. Search for [Gmail](#).

DONE WHEN: The Gmail plugin is visible as installed or available to install.

3. If it is already installed, do not install it again. Return to the Email project.

DONE WHEN: You are back in the Email project.

4. If it is missing, click its plus or install button.

DONE WHEN: Gmail shows as installed.

5. Start a new chat in the Email project. If asked to connect, choose the approved company account and complete the provider login yourself.

DONE WHEN: Codex can verify Gmail is connected to the approved company account.

If installation or company access is blocked, use the Setup Helper. It writes the blocker; it does not ask for your secret information or choose a broader account.

Step 6 - paste the Email prompt

Open [COPY-PASTE-PROMPTS.txt](#). Copy everything under **PROMPT 1**. Replace [\[TYPE YOUR NAME\]](#) with your name. Paste it into the Email project chat and send it.

DONE WHEN: Codex says the live task is [EMAIL-HW-001](#) and starts with no more than 25 inbox messages.

The full prompt is also printed in the Email starter's [START-HERE.md](#). Do not shorten it: the last lines are the rules that stop mailbox changes.

Email proof

Stop when all of these are visible:

- [EMAIL-TRIAGE-REPORT.md](#) exists.
- It shows the selection rule and no more than 25 reviewed messages.
- It uses REPLY, DECISION, READ, LOW PRIORITY and HUMAN REVIEW.
- Sensitive messages are not quoted.
- It says no email was sent, drafted, archived, labelled, deleted, moved, marked read or unread, and no attachment was opened.
- The workspace validator passed.

DONE WHEN: You can show the report on your screen. A connected Gmail account alone is not completion.

Project 2 - Drive Inventory AI Human

Step 7 - open the Drive folder as a separate local project

1. In the ChatGPT desktop app, choose **Codex**.

DONE WHEN: Codex is selected.

2. Add another local project. Choose Documents > AI Humans > 02-Drive-Inventory-AI-Human.

DONE WHEN: The Drive project appears separately from the Email project.

3. Start a new chat inside the Drive project.

DONE WHEN: The new chat belongs to the Drive folder, not the Email folder.

Do not attach both folders to the same project. Separate folders are what keep the two AI humans from mixing memory or state.

Step 8 - connect Google Drive only if it is missing

1. Open the **Plugins** tab.

DONE WHEN: The plugin directory is visible.

2. Search for Google Drive.

DONE WHEN: The Google Drive plugin is visible as installed or available.

3. If already installed, return to the Drive project. If missing, click its plus or install button, then start a new chat in the Drive project.

DONE WHEN: The Drive project is open in a new chat with the plugin available.

4. If asked to connect, choose the approved company account and complete the provider login yourself.

DONE WHEN: Codex verifies the approved company Drive is connected.

Step 9 - paste the Drive prompt

Open [COPY-PASTE-PROMPTS.txt](#). Copy everything under **PROMPT 2**. Replace [TYPE YOUR NAME] with your name. Paste it into the Drive project chat and send it.

DONE WHEN: Codex says the live task is DRIVE-HW-001 and reads metadata for no more than 25 items.

Drive proof

Stop when all of these are visible:

- `DRIVE-INVENTORY.md` exists.
- It says `First bounded batch`, not complete inventory.
- It shows the selection rule and no more than 25 items.
- Missing fields say UNKNOWN; sensitive titles say HUMAN REVIEW.
- It says no Drive file was opened beyond metadata, downloaded, created, edited, renamed, moved, shared, unshared, deleted or organized.
- The workspace validator passed.

DONE WHEN: You can show the inventory on your screen. A connected Drive account alone is not completion.

Optional bonus - LinkedIn Draft AI Human

Do this only after both required projects pass.

1. Copy `03-LinkedIn-Draft-AI-Human-OPTIONAL` from the untouched starter pack into Documents > AI Humans.

DONE WHEN: The optional folder exists beside the other two.

2. Add it as a third, separate local project in Codex.

DONE WHEN: The LinkedIn Draft project is open separately.

3. Open `COPY-PASTE-PROMPTS.txt`. Copy everything under **PROMPT 3**. Replace `[TYPE YOUR NAME]` with your name. Paste it and answer one question at a time.

DONE WHEN: Codex uses only the safe facts you supplied.

4. Stop when `LINKEDIN-DRAFTS.md` says `DRAFT - NOT PUBLISHED`, lists your supplied facts, gives three headline choices and one About draft, and says no LinkedIn action occurred.

DONE WHEN: You can show the local draft. Nothing was posted or messaged.

What to bring back

Bring the laptop or screenshots that show:

- Email project open with `EMAIL-TRIAGE-REPORT.md`.
- Drive project open with `DRIVE-INVENTORY.md`.

- The final evidence row and validator pass in each project.
- Optional: `LINKEDIN-DRAFTS.md` marked DRAFT - NOT PUBLISHED.

Do not bring email bodies, passwords, one-time codes, private HR details, banking information, or sensitive Drive content. Show the safe report headings and proof.

Stop rules

Stop and use the Setup Helper if:

- the correct folder is not visible;
- the app or button names do not match;
- the company plugin cannot be installed or connected;
- the wrong account is connected;
- a permission asks for Full access;
- the AI asks for a password, one-time code, Terminal, PowerShell, Command Prompt, Python, a CLI, Git or GitHub;
- the task reaches medical, dosage, certification, legal, spend, credentials, banking, personal HR or another sensitive decision.

Setup Helper resolves safe setup. Ambuj receives only an unavoidable company-access problem. Abilash receives owner decisions and every Gate 0 issue.
